Triangle.java

```
/**
 * this will override the name method in teh shapes class.
 * this will make the name of the shape.
 * @return triangle as the name of the shape.
 */
3 usages
@Override
public String name() {
    return "Triangle";
}

/**
 * will override hashcode in shape class.
 * this will give a value to the triangle.
 * This will be based on the base and height of the triangle.
 * @return a number value for the triangle.
 */
```

CheckStyle Scan

Rules: tcss305

- Checkstyle found 1 item(s) in 1 file(s)
  - Triangle.java : 1 item(s)
    - Definition of 'hashCode()' without corresponding definition of 'equals()'. (76:5) [EqualsHashCode]

assignment2_shapes > src > shapes > Triangle > name 66:25 CRLF UTF-8 4 spaces
